PROFESSIONAL SUMMARY

Analytics and ML professional with 8+ years building AI-enabled decisioning tools, statistical models, agentic engineering workflows, and the AI governance frameworks that make GenAI safe to deploy in high-stakes risk environments. Proven track record designing GenAI/LLM tooling and trained ML models, evaluated against ground truth, and adopted enterprise-wide.

EDUCATION

David Eccles School of Business - University of Utah — Salt Lake City, UT
Master of Science in Business Analytics — December, 2022

Brigham Young University — Provo, UT
B.S. Statistics — December, 2018

WORK EXPERIENCE

Fannie Mae — Washington, D.C.
Senior Risk Analyst & Data Scientist — February 2022 – Present

- Built 10 custom GitHub Copilot agents and authored the supporting AI governance framework (role boundaries, IIA-aligned guardrails, communication standards) — reducing audit analytics time by 80% while expanding test coverage 3x.
- Built RADAR (Risk Analytics Data for Access Review), a web application automating 13 ITGC controls across access, change management, and incident management — replacing manual sampling with full-population testing and saving an estimated ˜930 hours/year.
- Built and deployed ML models (NLP, anomaly detection, peer analysis), R Shiny dashboards, and automated ETL pipelines; partnered with IT, audit, and risk stakeholders to define KPIs and co-design scalable analytics aligned with enterprise data governance.

HealthEquity — Draper, UT
Senior Internal Auditor – Data Analytics Lead — February 2018 – February 2022

- Built analytics pipelines and Tableau dashboards for audit, risk, and compliance monitoring; automated controls testing using SQL, VBA, and Azure.
- Managed GRC system integrations and delivered data solutions for internal stakeholders.

SELECTED PROJECTS

neifertg.github.io/risk-analytics-portfolio

- Audit Engagement Co-Pilot: designed an MCP (Model Context Protocol) server exposing 7 tool-calling endpoints over an existing audit-analytics toolchain, with automated fault-injection tests confirming graceful failure — a working prototype of agentic, tool-using AI workflows.
- Built and benchmarked unsupervised ML models (Isolation Forest, DBSCAN) for fraud-anomaly detection against existing rule-based checks — quantified where each approach wins.
- Built and validated an audit-sampling calculator against AICPA's published statistical tables for real-world accuracy.

CERTIFICATIONS

AWS Cloud Practitioner, Splunk Core Certified User, COSO Internal Control Certificate, Certified Internal Auditor (CIA)

SKILLS

Languages: Python, R, SQL, PowerShell

AI Engineering & ML: NLP, Predictive Modeling, Clustering, Anomaly Detection, RAG, Multi-Agent Orchestration, Prompt Engineering, Evals, AI Governance

Cloud & DevOps: AWS (SageMaker AI, Bedrock), Docker, GitHub Actions (CI)

Platforms & Tools: VS Code, GitHub Copilot, MCP, Git, Jupyter, Posit (R), Tableau, Jira, Bitbucket, GRC Tools
